Persona Design

Problem 4 of 6 | Problem statement

The problem today

VANI talks to every seller in one voice and one style, and keeps it for the whole call. Sellers differ in pace, patience, language and how they object, and a seller who gets irritated, confused or rushed mid-call still gets the same delivery.

The challenge

Before each call, build the VANI persona that fits that seller from their seller data, and adapt it live as the call unfolds.

What You'll Build

Problem 4 of 6 | Persona Design

A persona built for each seller, that adapts during the call

1. **Seller data as input:** profile, business type, turnover, categories, engagement, past call outcomes and objections (provided)
2. **Persona generator:** sets voice (gender, accent, pitch, pace), language (Hinglish mix, formality) and tone (warmth, empathy)
3. **Conversation plan:** opening, personalisation, objection playbook, escalation rules and guardrails, each tied to seller data
4. **Evidence from past calls:** which persona choices work for which seller types, from transcripts, summaries and outcomes
5. **Live adaptation:** spot frustration, confusion, interest, a language switch or a rush, and change the persona mid-call
6. **Voice demo on Sarvam:** the same scenario for 2 to 3 contrasting sellers, with at least one live mid-call switch

Outputs and Scoring

Problem 4 of 6 | Persona Design

What you hand in, and how we judge it

Expected outputs

- Persona generator running on sample seller files
- Persona spec per seller, with the reason for each choice
- Live demo with at least one mid-call switch
- Switch log: signal detected, change made, reason

Success metrics

- Fit of each persona to its seller
- Correct, well-timed mid-call switches
- Distinctness of personas across seller types
- Natural voice in 2+ languages
- Support from past-call evidence

Build on the Sarvam AI Platform

India's full-stack voice AI platform, provided to every team

1

Speech-to-Text

Saaras: speech recognition across 22 Indian languages + English, including code-mixed Hinglish

2

Text-to-Speech

Bulbul: natural Indian voices in 11 languages with control over speaker, pitch and pace

3

LLM & Translation

Sarvam LLMs for Indian-language reasoning, plus Mayura translation

4

Voice Agents

Build, test and deploy agents across telephony, WhatsApp, web widget and API

Access: Each team gets API keys / credits on **dashboard.sarvam.ai**. Use the Python or JavaScript SDK, REST or WebSocket APIs.

Docs: docs.sarvam.ai | Sarvam team members will be on the floor for platform support on both days.

Submission Process

Submission window: 2:00 PM to 11:59 PM on Day 2

1 Build

Build your voice agent / solution on the Sarvam AI platform using the provided keys

2 Record

Record a 5 to 7 minute demo video showing the solution working end to end

3 Package

Prepare the solution folder: code, README, skills.md and sample outputs

4 Submit

Upload via the submission link shared on Day 1; one submission per team

Checklist

- Demo video (5 to 7 min)
- Problem statement chosen + approach note
- Agent ID / live link on Sarvam platform
- Solution folder with code and README
- skills.md: your build journey and tools used
- Team name and member details

Evaluation Criteria

Five criteria, scored 1 to 5 by every jury member

25%

Business Impact

Lift on the problem's success metrics; scale of benefit for VANI, buyers and sellers

20%

Solution Completeness

Share of the expected outputs delivered and working end to end

20%

Technical Robustness

Sound logic and validation on real data; handles edge cases and failures

20%

Voice Experience

Natural, low-latency conversation; multilingual and Hinglish handling

15%

Demo & skills.md

Clarity of the demo and of the documented build journey

Facilities & Hackathon Rules

What we provide

📍 **Venue:** 11th Floor, blocked for the hackathon

🔑 **Platform:** Sarvam AI API keys / credits and LLM key per team

📶 **Setup:** High-speed Wi-Fi and power points at every desk

🍽️ **Food:** Breakfast, lunch and evening refreshments on both days

👩‍💻 **Support:** Mentors and Sarvam experts on the floor

👕 **Swag:** Hackathon T-shirt for every participant

Rules & guidelines

- Teams of 3, with at least 1 non-tech member
- Each team picks one of the 7 problem statements
- Bring your own laptop; all build work happens during the 2 days
- Use the data provided responsibly; no customer data leaves the premises
- Submit by 11:59 PM on Day 2; late entries are not evaluated
- Stay on the 11th Floor and report on time both days
- Plagiarised or pre-built solutions are disqualified
- The jury's decision is final
