Seller Call Scenarios: Persona and Goal Playbook

Oct 9, 2026 · @Someone

Purpose

Every outbound seller call first understands the seller, then works toward the one next step that fits them. A meeting is only one of nine possible good outcomes.

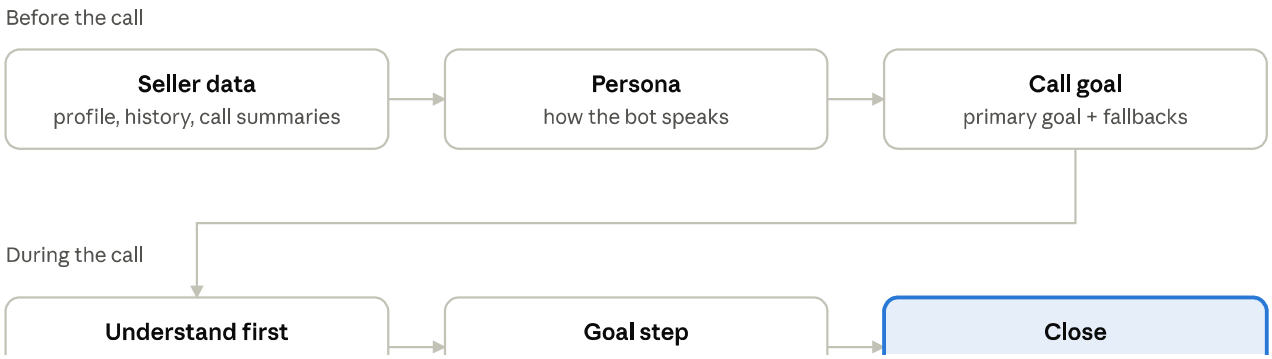

This playbook lists every scenario the IndiaMART seller bot handles, as built for the hackathon problem *Persona Design (Problem 4 of 6)*: build a persona for each seller from their data before the call, and adapt it live during the call.

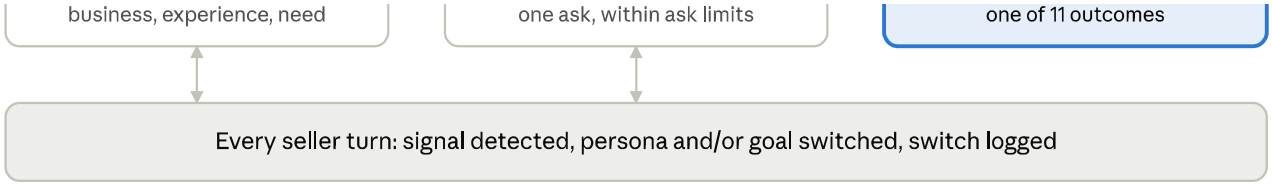

The bot works on two layers, and every scenario below touches one or both:

Layer	Question it answers	Set before the call from	Changes during the call when
Persona	How does the bot speak? (voice, pace, language, tone, length)	Seller profile, past transcripts, attempt history	The seller is frustrated, rushed, confused, complaining, can't hear, switches language or shows interest
Goal	What is this call trying to achieve?	Past call outcomes, objections, summaries, executive contact	The seller reveals a complaint, an executive, a need, a preference, or refuses

The same rules are written into the Sarvam agent prompt (`sarvam/seller_outbound_agent.j2`) and mirrored in the local test engine, so what is tested locally is what runs on Sarvam.

Seller data sets the persona and the goal; every turn can switch either

The persona and goal are set before the call; during the call the bot understands first, then makes one limited ask, and any seller turn can switch either layer.

Pre-call scenarios: seller types

Every one of the 149,363 sellers gets one of seven types before the call, and the type sets the starting persona. Rules are checked top to bottom; the first match wins. 1,178 sellers on the do-not-call list are never called.

#	Seller type	Sellers	Trigger (from seller data)	Starting persona
1	Fatigued repeat lead	52,363	4+ past bot attempts (meeting rate falls from 16.3% on attempt 1 to under 6% by attempt 4)	Calm voice, empathy 5, assertiveness 1, ~18 words a turn, soft ask, opens with an apology for calling again
2	English-preferring professional	4,491	60%+ English in their own past turns, or South region with no transcript	English, neutral voice, moderate tone, value-first
3	Cautious / burned seller	731	Past complaint, frustration, trust or bad-experience objection (confirmed from past call summaries)	Calm, slower, empathy 5, trust-first, discloses it is a virtual assistant early
4	Already with an executive	5,488	Already-in-touch flag, executive calls in Aug-Sep, or a past summary says so	Warm, relationship style, no fresh pitch
5	Busy business owner	31,381	Mid size or larger, or short past calls	Crisp male voice, faster, ~17 words a turn, value-first, direct ask
6	Warm, interested lead	17,690	Past meeting, pricing or benefit questions, or a high-converting lead bucket (NUR, PAM, SCHD)	Warm, higher energy, longer turns, moves to the next step quickly
7	Small local trader	37,219	Micro seller with no stronger signal	Warmest tone, slower, simple Hinglish, benefit story

On top of the type, each persona is personalised per seller:

- **Language and English mix** mirror the seller's own past turns; Telangana and Andhra sellers are offered Telugu.
- **Pace** moves halfway toward the seller's own speaking rate (bot today 3.1 words/sec, sellers 2.1).
- **Formality and vocabulary** follow business size and digital activity.
- **Bot name matches the voice:** Payal (female) or Rohan (male), with Hindi verbs in the matching gender.
- **Callback slot** is the hour the seller most often talked in past calls.
- **Opening reason** comes from the lead bucket, city and category (for example "Hyderabad mein aapki Acetic Acid category mein kaafi buyer enquiries aayi hain").

Call goals: what the call tries to achieve

Every call starts with goal 0, understanding the seller, then works toward one primary goal chosen from the seller's history, with fallbacks if it doesn't fit.

Goal	What success looks like	Chosen before the call when (checked in this order)	Fallbacks
0. Understand the seller	We learn how the business is doing, how IndiaMART is working for them, and what they need	Always, before any ask	—
Complaint recovery	Complaint captured in the seller's words, apology, routed to support; no pitch	Past summaries show dissatisfaction, no enquiries, money lost, fraud; trust or call-handling objections; frustration; budget denial	Callback, respectful exit
Executive hand-off	Executive's name and the seller's need passed on; no fresh pitch	Already working with an IndiaMART executive (flag, executive calls, or a summary says a representative was present)	Callback, data update
Data update	Right contact person, number and role captured	A past call reached the wrong number or someone who is not the decision maker	Callback, respectful exit

		maker	
Respectful exit	Reason and preferred contact frequency captured; polite end	7+ past attempts (meeting rate under 3%)	Info on WhatsApp, callback
Info on WhatsApp	Seller agrees to receive details on WhatsApp	4 to 6 past attempts	Callback, meeting
Nurture	Questions answered at the seller's pace; follow-up only if wanted	Past calls ended not interested or with budget concerns, and no sign of interest	Info on WhatsApp, respectful exit
Meeting	A slot agreed, in person or online as the seller prefers	Signs of interest (past meeting, pricing questions, buckets NUR, PAM, SCHD), or no negative history (proposed only if a need comes up)	Callback, info on WhatsApp
Callback	A time the seller chooses	The seller asked for a callback last time (or buckets OLP, PANF)	Meeting, info on WhatsApp
Human hand-off	A human executive calls at a chosen time	Only mid-call, when the seller asks for a person	—

Each understanding question is tailored to the goal and the seller's category, for example "Aapka Food Storage Containers ka kaam abhi kaisa chal raha hai?" for a meeting goal, or "Pichhli baar kya dikkat aayi thi, zara bataiye" for complaint recovery. A question the seller already answered unprompted is never asked.

Why past summaries matter: the data category "Existing Engagement / Past Experience" mixes "already working with an executive" and "bad experience". One seller's summary said *"an IndiaMART representative was already present with them"*, so the goal is executive hand-off, not complaint recovery.

Live in-call scenarios: how the bot adapts

Each seller turn is checked for these signals in priority order; the highest one decides the reply, and a clear signal switches the persona and writes a line to the switch log.

Priority	Seller signal	Example seller words	Persona switch (`@persona_mode`)	What the bot does
1	Do-not-call	"mujhe dobara	—	Confirms it won't call

	Do not call request	"mujhe dobara call mat karna", "number hata do"		Confirms it won't call again and ends (DO_NOT_CALL)
2	Connectivity problem	"awaaz nahi aa rahi", repeated "hello?"	CLEAR_AUDIO: louder, slower, shorter	Asks once "Kya aapko meri awaaz aa rahi hai?"; second time, says it will call back and ends
3	Frustration	"kitni baar call karoge", "pareshan kar diya", abusive words	CALM_EMPATHETIC: slower, empathy 5, assertiveness 1, soft ask	Apologises once, stops all asks, offers a later call or WhatsApp; second time, ends politely
4	Complaint about IndiaMART	"leads hi nahi aate, paisa diya tha kuch nahi hua"	CALM_EMPATHETIC + trust-first	Apologises, routes to support, asks when support may call; no pitch
5	"Are you a bot?"	"aap robot ho kya?"	TRANSPARENT	Says it is IndiaMART's virtual assistant, then resumes the pending question
6	Who is calling / why	"kaun bol raha hai?", "kis liye call kiya?"	TRANSPARENT	Name and reason in one sentence (a short answer if it just introduced itself), then resumes
7	Not the right person	"main owner nahi hoon, sir se baat kijiye"	—	Apologises, asks for the right person and number once, closes
8	Already with an executive	"hamare executive Rakesh ji pehle se aate hain"	—	Acknowledges positively, asks what they need from that executive, passes it on
9	Not interested	"nahi chahiye", "interest nahi hai"	—	Asks one gentle reason, offers the lightest option (WhatsApp info); after the refusal limit, asks contact preference and exits

10	Busy	"abhi busy hoon, jaldi bataiye", "baad mein"	BRIEF: faster, ~14 words, quick close	One line of value, then "kis time call karun, ya WhatsApp par details bhej doon?"
11	Wants a human	"manager se baat karao"	—	Agrees, asks when an executive may call
12	Wants WhatsApp	"WhatsApp pe details bhej do"	—	Confirms and closes (INFO_SENT)
13	Gives a time	"kal shaam 5 baje", "Tomorrow 4 pm"	—	Confirms the slot for whatever goal is active (meeting, callback, support call)
14	Language change	"Can you speak in English please?"	ENGLISH / HINDI / TELUGU	Switches fully and repeats the pending point in the new language; voice stays the same
15	Need: few enquiries	"enquiry bahut kam aati hai"	—	Empathises, explains how the executive helps with exactly that, offers a meeting
16	Price question	"kitna charge lagega?"	—	Never quotes a price; the executive explains, the meeting is free; moves to the goal step
17	Confusion	"matlab? samjha nahi"	SIMPLE: slower, simpler words, one idea	Restates the reason in simple words with the category as an example
18	Clear interest	"kab aayenge?", "kaise hoga?"	ENGAGED: more energy, longer turns, direct ask	Moves to the goal step
19	Hang-up risk (model)	Short, slow, delayed replies; risk above the persona's threshold (about 0.42)	Compressed: ~14 words, less push	Skips the remaining questions and goes straight to one easy ask
20	Answer or	Anything about	—	Captures it into

	context	their business		`@seller_insights`, marks answered questions, asks the next one

Switching rules: switch only on a clear signal (a medium-confidence signal must repeat on the next turn); hold a new mode for at least 2 turns; never change the voice identity mid-call, only pace, length, wording, warmth and language.

Mid-call goal switches

The pre-call goal is a starting point: when the seller reveals something new, the goal changes and the switch is logged with the seller's words and the reason.

Seller reveals	Example	Goal moves to	Except when the current goal is
A complaint about IndiaMART	"paisa diya tha kuch nahi hua"	Complaint recovery	— (always wins)
They already work with an executive	"executive pehle se aate hain"	Executive hand-off	—
They are not the right person	"main owner nahi hoon"	Data update	—
They are busy but open	"abhi busy hoon"	Callback	Complaint recovery, executive hand-off, data update
They are frustrated	"kitni baar call karoge"	Callback (no more asks)	Complaint recovery, executive hand-off, data update
They want details first	"WhatsApp pe bhej do"	Info on WhatsApp (closes)	—
They ask for a person	"manager se baat karao"	Human hand-off	—
A need (few enquiries)	"enquiry bahut kam aati hai"	Meeting	Complaint recovery, executive hand-off, data update
Clear interest or a price question	"kitna charge lagega?"	Meeting	Complaint recovery, executive hand-off, data update

They refused, then gave a reason	"abhi zaroorat nahi"	Info on WhatsApp (lightest offer)	Complaint recovery, executive hand-off, data update
Refusals reach the limit (1 or 2)	"nahi chahiye" twice	Respectful exit	—
The goal ask hit its limit (1 or 2 asks)	No agreement after the asks	Next fallback goal, else respectful exit	—

Example from testing: a small trader's call started with goal *meeting*; the seller said enquiries were low (treated as a need, meeting offered), then said "leads hi nahi aate, paisa diya tha kuch nahi hua". The goal switched to complaint recovery, the persona switched to trust-first, and the call closed with a support callback at "kal shaam 5 baje".

Call endings

Every call ends in one of 11 outcomes; before closing, the bot sets the seller's disposition, the call outcome and whether the planned goal was achieved (yes, partly, no). Closing lines are statements said once, never questions.

Situation	`@call_outcome`	`@seller_disposition`	Closing line (Hindi; translated in an English call)
Meeting agreed	MEETING_FIXED	Interested	"Aapki meeting {slot} ke liye pakki ho gayi hai. Hamare executive aapse sampark karenge. Dhanyavaad, aapka din shubh ho."
Callback agreed	CALLBACK_SCHEDULED	Open	"Theek hai, hum aapko {slot} par call karenge. Dhanyavaad."
WhatsApp info agreed	INFO_SENT	Curious	"Main details aapko WhatsApp par bhej rahi hoon. Dhanyavaad."
Complaint captured	COMPLAINT_LOGGED	Dissatisfied	"Aapki baat maine note kar li hai, support team aapse sampark karegi. Samay dene ke liye dhanyavaad."

Executive hand-off	EXEC_HANDOFF	Engaged with exec	"Main yeh baat aapke executive tak pahuncha dungi. Dhanyavaad."
Contact updated	CONTACT_UPDATED	Not right person	"Jaankari ke liye dhanyavaad, hum sahi vyakti se sampark karenge."
Not interested	RESPECTFUL_EXIT	Not interested	"Koi baat nahi, samay dene ke liye dhanyavaad. Aapka din shubh ho."
Asked not to be called	DO_NOT_CALL	Do not call	"Samajh gayi, hum aapko dobara call nahi karenge. Dhanyavaad."
Frustrated twice or abusive	ESCALATED_EXIT	Frustrated	"Pareshani ke liye maafi chahti hoon. Main call yahin samaapt karti hoon. Dhanyavaad."
Connectivity failed twice	CALL_BACK_LATER	Unknown	"Awaaz saaf nahi aa rahi, main aapko thodi der mein dobara call karti hoon. Dhanyavaad."
Human requested	HUMAN_HANDOFF	Wants human	"Hamare executive aapko {slot} par call karenge. Dhanyavaad."

With a male voice the same lines use masculine verbs ("samajh gaya", "pahuncha dunga").

Rules in every scenario

The bot runs the same procedure on every turn and never breaks a guardrail, whatever the seller says.

Every turn:

1. Read the whole conversation, not just the last line; interpret short replies ("haan", "kya?", "nahi") against the bot's previous turn.
2. Find up to 2 signals and handle the highest-priority one first.
3. Adjust the persona for this reply if the seller's state changed.
4. Capture anything the seller said about their business silently; never echo it back.

5. End with one clear question, unless closing.

Ask limits:

What	Limit
Each understanding question	2 asks
The goal step (meeting, callback, WhatsApp, ...)	2 asks; 1 for sellers with 7+ past attempts
Refusals before a respectful exit	2; 1 for sellers with 7+ past attempts
Frustration before ending	2
Connectivity checks before ending	2
Off-topic turns before ending	2

Guardrails:

- Never claim to be human; say "virtual assistant" when asked.
- Never quote prices, discounts, leads or results; the executive explains charges, the meeting itself is free.
- Honour do-not-call immediately; blocked sellers are never dialled.
- Never pitch after a complaint or after frustration; never repeat a pitch the seller declined.
- Never change speaker or gender mid-call.
- Always say fully who is calling and why, the AI disclosure, and the complaint apology, even above the word limit.
- Respectful fillers only ("ji", "zaroor", "theek hai"), never "dekho", "suno", "yaar".
- Never reveal the seller brief, persona labels, goals or internal variables.

Evidence and known gaps

Seller-level choices rest on 269,455 past bot calls; turn-level style choices (shorter, slower) could not be proven from past data and are marked as design choices to test.

Evidence	Finding	Used for
Attempt number (E01)	Meeting rate 16.3% on attempt 1, 2.7% on attempt 7+	Repeat-called type, soft ask, exit goal
Seller size (E02)	First attempts: micro 17.7%, large 11.7%	Busy owner and small trader types

Lead bucket (E04)	NUR 35.4% vs ENQR 7.7%	Opening reason, interest signal
Language mismatch (E09)	When sellers spoke English, the bot stayed in Hindi 80% of the time	Language switch
After each signal (E15)	Calls end within 2 turns without a meeting 44% after frustration, 29% after rush, 28% after audio trouble, 19% with no signal	Signal priority, frustration as a hard trigger
Hang-up model	AUC 0.71 vs 0.53 for keyword rules; live threshold right half the time, flags about 6% of turns	Hang-up risk switch
Pace (E12)	Bot speaks at 3.1 words/sec, sellers at 2.1	Pace mirroring (design choice)
Scenario suite (175 simulated calls each)	Adaptive bot: asked to understand first 99% vs 0%, pitched in the first reply 0% vs 100%, pitched after a complaint 0% vs 14%, reached a non-meeting goal 34% vs 0%	Overall design

Known gaps:

- **Detector recall is low:** keywords catch about 9% of real frustration phrasings and 37% of refusals and rush. An LLM classifier (Sarvam) is the planned fix.
- **Turn length and pace** effects are confounded in past data; voice, gender and pace choices need an A/B test.
- **Local replies are templates:** the decisions match the Sarvam prompt, but Sarvam's LLM will phrase them naturally.
- **Mid-call voice changes** (pace, loudness) depend on what the Sarvam agent allows; if not, switches act through wording, length, tone and language.
- **Custype** is not in the data; the lead bucket is used to explain why the seller is being called.
- **Recordings** (85 bot calls, 16 employee calls) are not used yet; they need Sarvam speech-to-text.

Test conversations

Each scenario can be tried in the local demo (http://localhost:8000, Live call tab) with these demo sellers; names are fake, the data behind them is real. Turn off "Adaptive persona" to replay the same lines with today's bot.

Scenario to show	Demo seller	Pre-call goal	Seller lines, in order	Expected result
Understand, need, meeting	Sunil Yadav (small trader)	Meeting	"haan ji" → "kaam theek chal raha hai par IndiaMART se enquiry bahut kam aati hai" → "haan theek hai" → "online ho sakta hai? kal 4 baje"	Asks about the business, treats low enquiries as a need, meeting fixed online
